

Votizer Installation Guide

Before running the installer, make sure that you have enabled the following server extensions:

- OpenSSL
- Rewrite module
- cURL
- PHP shadow(download this extension here <http://phpshadow.com/download.php> and install it on you server)

Than run the installer (by going manually to [domainUrl]/installer) and enter database connection info.

After you submit them you will be redirected to the Admin control panel (ACP) login. We have created a default account so you can login the first time. Enter admin in the username field, and password in the password field to login. First of all DON'T FORGET to change the default admin password in the edit user action of the users section.

After you have changed the password go into settings section. In order to fill the data in settings, you need paymentall account (<https://api.paymentwall.com/pwaccount/>), Disqus account (<https://disqus.com/profile/signup/?next=https%3A%2F%2Fdisqus.com%2F>), and a google account to get reCaptcha keys (<https://www.google.com/recaptcha/admin#list>). Also you need to sign up for the google analytics feature which is advised but not required (<https://www.google.com/analytics/web/provision?et=&authuser=#provision/SignUp/>).

Fill all of the sections with the required info and submit it.

If you followed all of the steps and finished successfully you can now delete the installer folder from the server.

Now same info about the ACP features.

The profanity filter is set up to work with a predefined list of common bad words. If you want to ban more words you can do that manually from the blacklist profanity page. Later you can ban users / IPs or URLs as needed.

The users, sites and subscriptions are the places where you can list all the users, their sites and see which of them are premium. You are allowed to manually remove or edit everything you need. Also if you want to make another admin, you can easily do so by creating a new user and giving him rank 2. You can also make a site premium in the sites page.

Customization has never been easier!

You can change the navigation links appearing order just by using drag and drop. Adding a new navigation link is also easy. This features are given in the settings page under the section other.

In the settings, others section also provides you an advertisement management feature where you can change either the location of an advertisement, remove or add a new one.

The others section also gives you a way to manage categories, and a theme changer.

This features are created in a user friendly manner with only one goal in our minds, to help you improve and reach your goals. All of your feedback about new features and improvements will be appreciated,

Let's be the best. Together!
